

Configuring PD&M 1996/2004/2012/2019

Content: page:

Programma-schijf: (local program directory)	2
Bestanden-Schijf: (central data source)	3
Stuklijsten-schijf (device for storage partlistfiles)	6
Prod.-uren-schijf (device for reading ordertime event files)	7
Virtuele-Schijf/Virtual disk: (destination for swap files)	8
Layout schijf (device for personal queries)	9
Color setting for documents and popup dialog box	10
Country related charset: how to modify	11
PDF print utility purchase orders	12
How to design your external documents	13
Example document: Inkoopopdracht-B03.nl (Inkoopopdracht-003.nl)	14
Factory Work Orders, Barcode charts:	18
User menu bdisk/umnu{term}.nl	19
Document color settings	19
Batch processing in Windows task manager (daily)	23
Rebuild files ('reorganiseren' from DosBox)	23
Check of EOF document numbers	23
Kernel of the DBMS	24

Programma-schijf: (local program directory)

Variablename: SCHIJF\$

Location for all .exe files and configuration file mcadinit.set. However separate CMD files from VB6 (Win 32) files. For administration, the .exe files have the same name and purpose but cannot call each other for running the application.

Examples of exe files are:

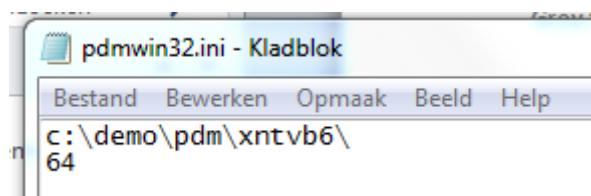

- Mcad

101

.exe – part of inventory management; configuring articles
- Mcad~~0101~~.exe - query overlay, part of P101.
- Mcadset1.exe (together with macdset1.dat): configuring by Administrator
- Subxdiox.exe – data exchange between documents (PDm96,2004: subx*.exe located at language device)
- Dllwl101.exe- module for configuring queries for DataDictionary for all queries
- Sys*.exe modules are for authorized people only.
- Sys_text.exe: changing text for referring module number.
- Sys_stocklock.exe – release stock after incomplete lock/unlock sequence
- Sys_noFkeys-disable use of function key and show document icon function bar (may occur between release 96 to 2012)

PDM2012 only:

Basically, PDM2012 is always installed in subdir c:\PDM2012\ with an additional configuration file to fix the current path. The current path is volatile in the windows environment. Create the file **pdmwin32.ini** with the path to this program directory. Save the file at **c:** or **c:\PDM2012** and nowhere else! PD&M will look only at these two places to detect the initial path to find the starting point:

The path is detected by 'Module2(PDM_VB6library.bas sub MCADINIT_SET_BASIS())', which collects all essential variables and devices.

The '64' at the second line of this text file is required, since 2013 PD&M transferred all 32/64 bit dependencies to '64' to fix style and displaying fonts. From user experiences: PDm2012 runs with XP, windows 7 professional, windows 8 and windows 10. Also XP requires the '64'.

Remark: The CMD modules (2004 or earlier) have probably been installed in c:\PDM96\.

Bestanden-Schijf: (central data source)

Variablename: BDISK\$

Mapping to central data source, for instance 'f:\bdisk\' from this terminal. The central data source contains all data-files, the DataDictionary 'PD&Mfs1.*' and needs subdirectories for:

For release 1996, 2004 and 2012:

..\\verslag\\ for montly reporting of project leaving Work in Progress

For release 2004 and 2012:

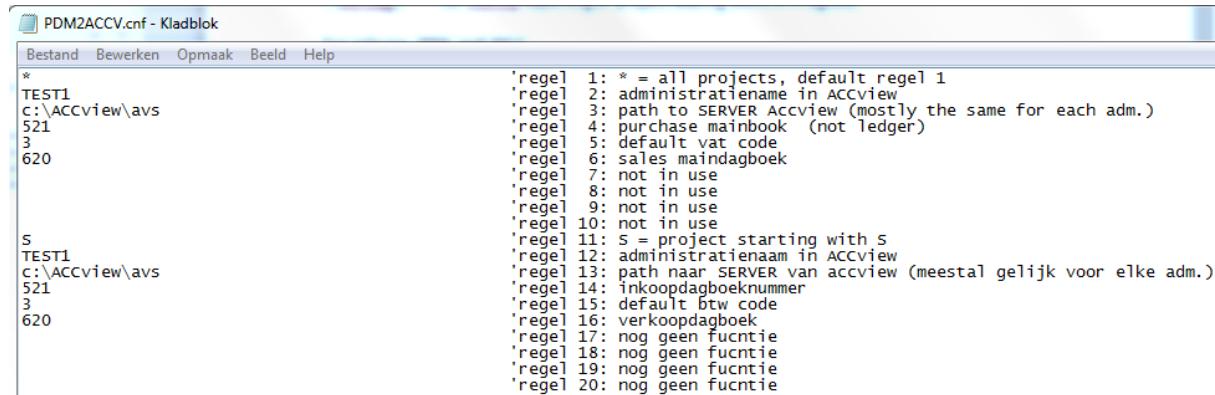

..\\edi\\... interfacing files and the excel file P293.xls64.xls (pls. activate macros) for the Project sheet. If not installed, the below error will occur

Bestanden-Schijf: (central data source, continued)

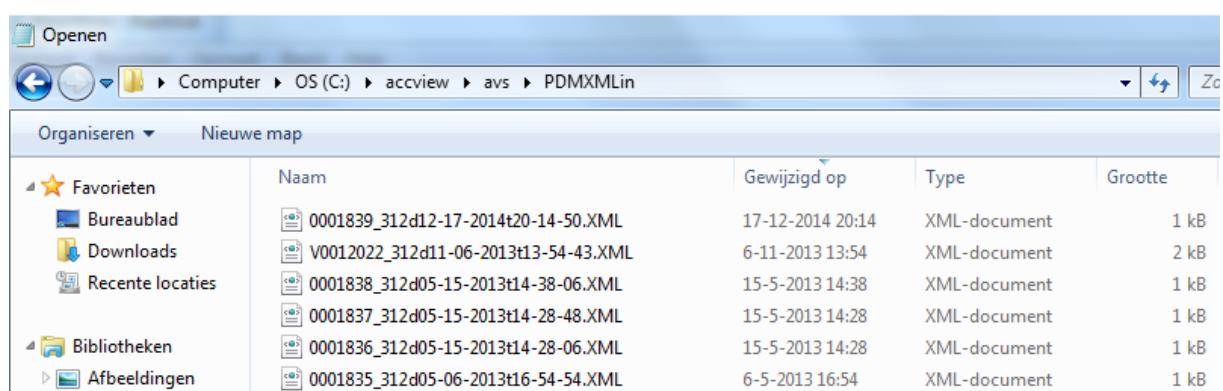

Configuration files PDM2012 for connecting account view:

..\\bdisk**PDM2accv.cnf** setup for connecting purchase&sales invoices to Accountview
Accounting Software by XML

```

Add subdir PDMXMLin at Accountview environment

No connection desired:

Type 'GEENKOPPELING' at the first line of ..\\bdisk\\mcadp360.cnf to disable the link to Accountview.

```
'mb06062014    source=mcadp360.vbp code mcadp360.vww
ACCview_exact_disable% = 0
Close #1: Open bdisk$ + "mcadp360.cnf" For Random As #1
Close #1: Open bdisk$ + "mcadp360.cnf" For Input As #1
recordcounter1% = 0
While Not EOF(1)
    Line Input #1, record1$
    recordcounter1% = recordcounter1% + 1
    If recordcounter1% = 1 Then
        If Trim(UCase$(record1$)) = "GEENKOPPELING" Then ACCview_exact_disable% = 1
    End If '=1
Wend '1
Close #1
```

Bestanden-Schijf: (central data source, continued)

Datadictionary:

The central data source needs to contain the actual DataDictionary (DDIC). Always save a backup of the present DDIC, f.a. in bdisk\DDICbackup\. The name of the DDIC is:

Copying needs the & to be replaced by a questionmark.

CMD Example:

Curdir=f:\bdisk

Copy e:\newDDIC\PD?mfs1.*

This will result in copying

```
c:\demo\bdisk>dir pd?mfs1.*  
De volledige naam van station C is OS

```

The datasource contains references to the file tables. All queries need the DDIC. The DDIC contains a lot of idle space for future extensions in so called 'extra segments' numbered 1 to 8 of max 50 fields each. Maintenance is centralized in Roderwolde the Netherlands.

All item text used in queries is linked by the DDIC. For example, see below the datarecord in DDIC for received purchased parts and materials. The first field is the 'Artcode' containing * for directly purchased parts of an article code (f.a. 2A1500X3) for inventory. The stored value starts at byte 1 with a length of 10 bytes and so on for the next fields. At the right see '101', referring to language file mcadp101.nl (in the Netherlands we use .nl) with reference to line 302 for language text:

FILESPECIFICATIONS PD&M --> INKMAT1.DAT

primary RDBMS refers to boekingen inkoopgoederen

HELP: #=GOTO RECORD S=SEARCH.. C=CON'T SEARCH ESC=END PROGRAM

Stuklijsten-schijf (device for storage partlistfiles)

Variablename: Tdisk\$

Part lists are stored with two files. The .STK files (stk=stuklijst, Stückliste) contains the bill of material data. The .TEK file is a relic and contains only eof parameters. (eof=end of file)

PM: if partlistdata is collected from Drawing Attributes (Acad) of objects inside Inventor, PDM2012 supplies modules to interact with by Excel. After import in PDM2012 these partlists can directly be transferred to a project without needing to save in the device for storage partlistfiles.

Modules for connecting Cad by XLS interface to PDm2012 release 2016

C:\pdm2012\Mcadp418.exe stand alone reading data to PD&M; can be activated by inventorVBA with 'shell c:\pdm2012\mcadp418.exe'

C:\pdm2012\Inv_wx01 reading project data

C:\pdm2012\Inv_wx03 reading article data

C:\pdm2012\Inv_wx04 reading supplier data

C:\pdm2012\Inv_wx08 client data

The inv_wx0?.exe modules need an (empty) xls as messaged below:

'kan niet worden gevonden' = cannot be found / nicht gefunden.

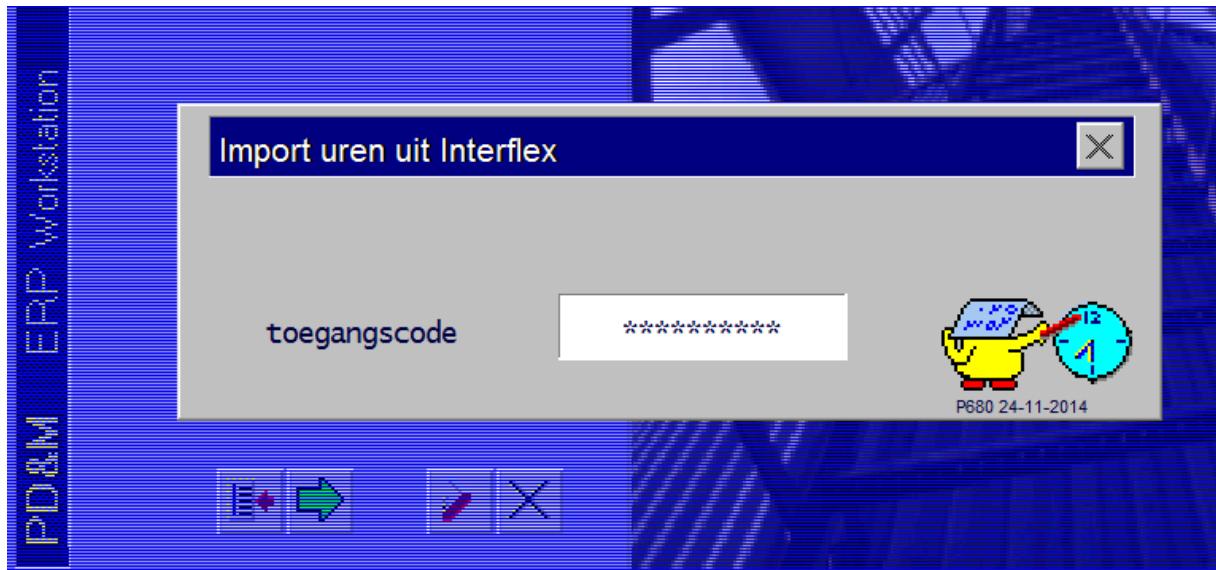

Prod.-uren-schijf (device for reading ordertime event files):

This device refers to the Interflex import file directory.

Not more available: Module for connecting Interflex (tested at *** Sneek) is mcadp680.exe:**

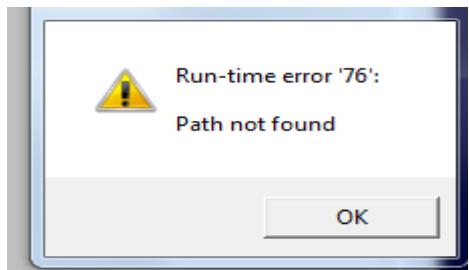

Module for connecting Eagle (tested at *** Emmen) is mcadp681.exe:**

Toegangscode = access code. For more than 25 years, this code remained 050-***3 and is still standing.**

Virtuele-Schijf/Virtual disk: (destination for swap files)

Installed by: 'subst T: c:\temp' from CMD or inside batchfile. Below error is generated if not installed.

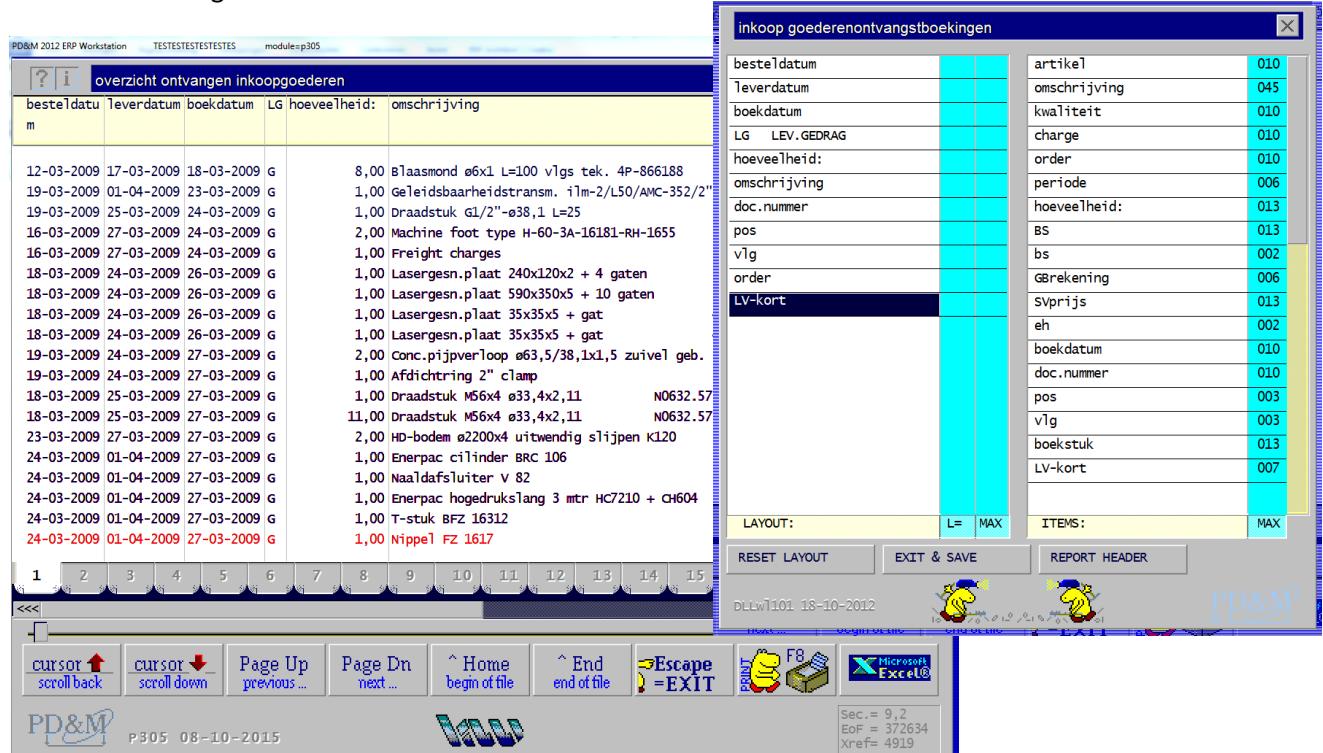

The remaining disks for CAD and I/O can be directed to a subdir ..\odisk.

Layout schijf (device for personal queries)

This device is preferred to be local to support special needs in layout design by each user. However, the administrator can prepare a basic set and install it during the initial installment. Commonly used is: C:\PDM2012\AYOUT.

Module c:\pdm2012\dllwl101.exe supports all design of layout. Up to 20 different layouts are below the users armlength control to extract data.

Storage at c:\PDM2012\layout: .CNF file contains report-header if available. The .001(..020) file contains the columnsetup for corresponding tab 001..020. This example mcadp305.001 uses cross references.

COLOR SETTING FOR DOCUMENTS and popup dialog box:

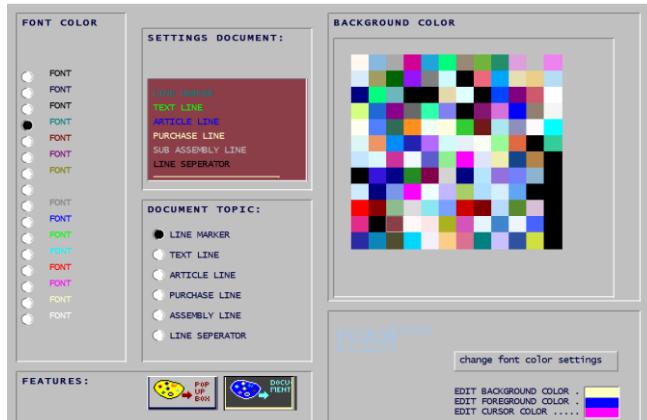

If the PD&M2012 document screen appears as black as black, there is need to configure some colour settings. These settings depend on the terminal number.

select a toolbar Swiss knife

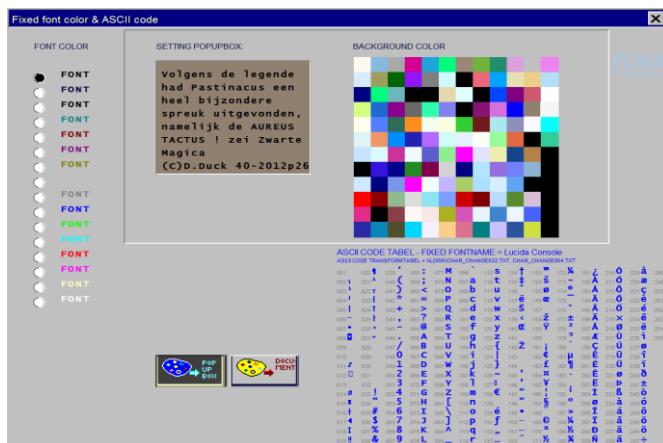

select color palette Pop Up Box

change setup for popup box

select button document

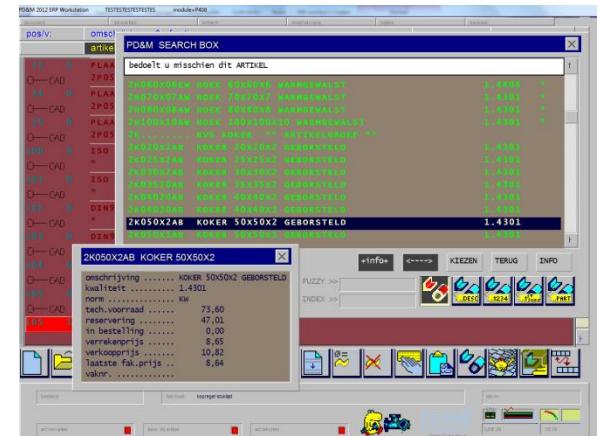

change setup for document

Resize screen:

In mainmenu only, use + and – button to resize. This takes a moment.
Use c:\pdm2012\sys_formsize.exe to reset to smallest screensize.

Above: example of document with dialog box (popup box)

Country related charset: how to modify

The language disk contains four conversion files. The contents are the same for 32/64 bit and screen versus printer. These files can be modified by an editor for plain text.

The four files:

-  char_change032.txt
-  char_change032_printer.txt
-  CHAR_CHANGE064.txt
-  char_change064_printer.txt

The filecontent: (teken=character=Zeichen)

01550248 diameterteken	diameter, Durchmesser
01300233 e met streep naar rechts	é
01370235 e met 2 punten	ë
01710189 teken ½	
01720188 teken 1/4	
02050248 diameterteken	
02210248 diameterteken	
02370248 diameterteken	
02410177 teken +-	
02480176 gradenteken	° character for degree
02530178 tot de macht 2 teken	[^] 2 power of 2

How it works:

'01550248 diameterteken' means that ASCIIcode 0155 will be replaced by ASCIIcode 0248. The 'diameterteken' is the sign made by O and /. (Durchmesser). Linking data from different sources supplies with different ASCIIcode for diameter. F.a. Autocad supplies 0155. Each time an ASCIIvalue above code 128 is displayed, PD&M checks these tables. The result of your settings is displayed at the screen before regarding color settings of the popup box.

External documents:

However, external documents have their own conversion due to differences in TTF fontfiles you may wish to use. Below example is from document-designfile inkoopopdracht-001.nl. (inkoopopdracht = purchaseorder):

```
#CHANGECH=01550216 eerste diameterteken
#CHANGECH=02050248 alweer een diameterteken tbv autocad 205 code conversie

#CHANGECH=02370248 diameterteken
#CHANGECH=02210248 diameterteken conversiefout 237 naar 221 hoofdletter Y met accentstreep
naar rechts

#CHANGECH=02480176 gradenteken
#CHANGECH=02530178 tot de macht 2 teken
```

PDF print utility purchase orders

Module c:\pdm2012\pdfp309.exe. Read Helpfile  to install PDFcreator Sourgeforge 2.0.

Document handle is passed by environmentstringvariable to autosave the document and have the PDF directly available for email.

How to design your external documents

Purchase order and Sales invoice:

**** each line of this designfile should contains at least 30 characters ***

Font:

```
#QTYLINES=0032      qty records purchase order per page  
#FONTNAME=ARLRDBD    'ARLRDBD = Arial Rounded MT Bold selected font  
#FONTSIZE=12          '** each line of this designfile should contains at least 30 characters *  
#CHANGECH=01550216   'replace a character, this is a diametercharacter to be replaced
```

Location text and images at xxxx mm form the left and yyyy mm from top:

```
#XXXXXXXXYY=00200036LEVADRES 'start first line supplier address  
#XXXXXXXXYY=00200014TEXT=INKOOPPOPDRACHT:  
#XXXXXXXXYY=00700014TAG=ORDERDOCUMENT      'ORDERNUMBER/DOCUMENTNR.  
#GRAPHICS=IMAGE_JPG X=1385 Y=0140 B=0630 H=0210 IMAGENAME=KW-50_1.jpg  
'LEVADRES' is a special function.  
'TEXT' means to print the text after TEXT=.  
'TAG' means to print the data specified after the = sign.  
'KW-50_1.jpg' is the filename of the image located at the language disk to be printed. Maintain the exact syntax. B means breedte or Width. H means hoogte of Height.
```

More ..

```
#XXXXXXXXYY=00900062TAG=FAXNUMMER 'FAXNUMBER of supplier  
#XXXXXXXXYY=00200062TAG=EMAIL_LEVERANCIER 'email of supplier
```

#XXXXXXXXYY=01400090FIELD=0159 'REFERENTIE

Use of field statement is not recommended by MB due to lack of transparency what is happening.
The '0159'refers to line 159 of mcadp309.nl, editable by SYS_TEXT.EXE FORM C:\PDM2012.

NB:

View mcadp309.vww (purchaseorder) of mcadp509.vww (salesinvoice) for above and new special functions. These function are part of a 'Select Case' function that can be extended easily on request of by your experienced programmer with VB6. Se below example of 'Document_Single'

```
* document nr mb28112013  
If InStr(RECORD1$, "DOCUMENT_SINGLE") > 22 Then  
    Selected_tekst$ = LTrim$(Str$(Inkoopdocumentnr&))  
    GoSub OUTPUT_TEKST_SCHERM_PRINTER  
End If 'ORDERDOCUMENT
```

Example document: Inkoopopdracht-B03.nl (Inkoopopdracht-003.nl)

The **B** means Basic text to be modified and copied to Inkoopopdracht-003.nl for Dutch Language document. This is in printing menu the 3th choice, the purchase order.

```

List of available user editable document files:

Purchase orders, plain text files locates at device 'language disk'.

The extension (for example: .nl) indicates the selected language. Create the files for each desired language. Normally, .nl (Dutch) .D (German) .E (English) and .F (French) will cover the need of language customized document.

Inkoopopdracht-001.nl orderbevestiging (purchase order confirmation)

Inkoopopdracht-002.nl controlelijst zonder prijzen (Receiving Goods Approval Order)

Inkoopopdracht-003.nl inkoopopdracht (Purchase order)

Inkoopopdracht-004.nl aanvraag (Inquiry)

Inkoopopdracht-005.nl kopie inkoopopdracht (copy of purchase order)

The numbers 001 to 005 equal the menu text lines 1 to 5 in the purchase order printing menu:

Factory Work Orders, Barcode charts:

These documents can be used directly and have no references to Company names etc. However, You can customise the document if you wish to do so. The 'werkinstructie'(Work Order) is located at the language disk in file 'werkinst1.nl'. The barcodechart is file 'werkkr1.nl'. The barcodechart is customized to the Interflex Interleave 2of5 barcode. The codesetup is inside PD&M; there is no need to install barcodefonts.

Also available, evaluate for use:

- Packing List &Direct Sales P351 and P355 (paklijst en kontantbon balieverkoop)
- P923+924 configuring value for VAT eo. (BTW en ordertoeslagen)
- P332 extracting WIP to ArchivedProgressreports (nakalkulatie)
- Copy company image.bmp to ..\disk\vestlogo.bmp.
Vestlogo=vestiginglogo=company=Niederlassung.

Usermenu Main:

The mainmenu for each terminal is stored at bdisk\umnu{terminalnumber in 0000 format}.nl

The .nl is replaced by the languageindicator is applicable.

The content of this plain text file stores the module numbers to the left followed with your menu item text .

These file can be copied to terminalnumers with the same settings.

Example file:

91 1)	offertes & budgetten	0
408 2)	fabricage stuklijst pd&m	0
94 3)	bouwgroepen	0
250 4)	voorkalkulatie	0
95 5)	beheer projektgegevens	0
600 6)	selectie afdruk produktie dok.s.	0
97 7)	beheer materiaal & uren	0
290 8)	voortschrijdende kalkulatie	0
101	artikel beheer	0
103	klanten beheer	0
105	leveranciers	0
107	order beheer	0
288	OHW+Uren+afroep per periode	0
504	VSK verkoopfacboekingen	0

Module 91 and 250 are no longer available in PDM2012.

Document color settings:

These setting have been stored at bdisk\termxxxx.ini (f.a. term0312.ini). After setting the colors for a terminal, this files may be copied to other terminal files.

Batch processing in Windows task manager (daily):

Batch289.exe - Work in Progress in periodical edition

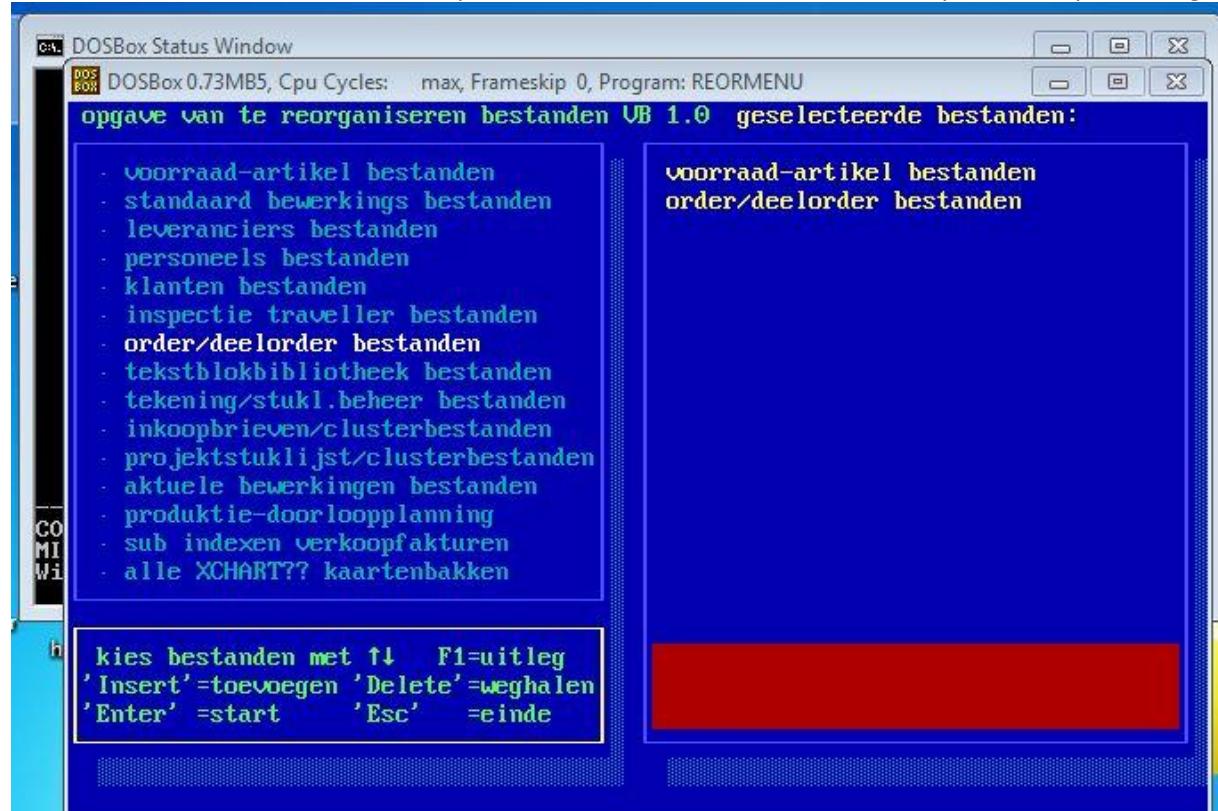

Bachtlv.exe - Indexing delivery times purchase orders for module P301

BatchMRP - Indexing MRP I requirements from stock and receiving goods to stock

Rebuild Modules (reorganiseren in Dutch):

Run these modules from DosBox by menumodule 'reormenu.exe' in c:\Pdm2012.

These modules are written in VBDOS professional and should never be interrupted while processing.

Check of EOF document numbers:

Documentnumbers for actual shoporders (actuele bewerkingen, table BEW4000.ndx) cycle from 1 to 32000 in format 400001 to 432000. Same for numbers of project linked partlists (projectstuklijsten, table SKL2000.ndx) from (2)00001 to (2)32000. Check the availability of enough space to 32000 or from zero to next number (in between 5000 is advised). Documentnumbers will be deleted during rebuilding (reorganiseren actuele bewerkingen, reorganiseren projectstuklijsten).

Kernel of the DBMS

Data reading is controlled by the data dictionary (DDic). The DDic is controlled by M.Balster. However, it is convenient to know how this is organized. Dosbox:module mcadp955.exe controls the tables and DDic field definitions. Fields have been specified with starting position in the recordbuffer, length, data type and reference to language file with filenumber and recordnumber in the language file. All user defined queries are in control by the DDic. One module (P130, HRM) that in source uses the VB6 library and the VB10 library, also controls data entry by the DD. Below screens show an impression of selecting a table, view the fields and the field listing. Per table eight extra segments of max. 50 field can be specified. However, the number of 2 extra segments (f.a. ORDER1.STM) is seldom reached. Do not change anything in the DDic. Contact M.Balster for extending data in the DDic.
